

# DIGITAL PATHOLOGY AI SCREENING REPORT

Attention Augmented Residual Deep Learning Framework for Lymphoma Detection

|                                     |                                       |
|-------------------------------------|---------------------------------------|
| Case Reference: CASE-B7AFF148       | Date/Time: 2026-09-03 10:07:40.307995 |
| Uploaded File: sj-05-588-R1_002.tif | Confidence Threshold: 95%             |

|                         |                                                |
|-------------------------|------------------------------------------------|
| Screening Status:       | NO LYMPHOMA DETECTED (REJECTED / UNCLASSIFIED) |
| Classification Subtype: | Not Classified as Lymphoma (Below Threshold)   |
| Model Confidence:       | Below Threshold (0.00%)                        |

## Three-Class Softmax Probability Distribution

| Class / Subtype | Full Medical Designation                                  | Calculated Probability |
|-----------------|-----------------------------------------------------------|------------------------|
| CLL             | Chronic Lymphocytic Leukemia / Small Lymphocytic Lymphoma | 5.31%                  |
| FL              | Follicular Lymphoma                                       | 54.79%                 |
| MCL             | Mantle Cell Lymphoma                                      | 39.90%                 |

**ACADEMIC RESEARCH & CLINICAL DECISION SUPPORT NOTICE:**  
This automated report was produced by the 'Attention Augmented Residual Deep Learning Framework for Lymphoma Detection' as a research-grade computer-aided screening tool. This system does not constitute a definitive medical or pathological diagnosis. Rejection or 'No Lymphoma Detected' indicates that the image features fell below the model's high-confidence threshold and must not be interpreted as definitive proof of cancer-free tissue. All digital pathology findings must be correlated with clinical context, immunohistochemistry (CD5, CD10, CD20, Cyclin D1), and board-certified pathological review.
